

IT Security Policy

Acme Logistics Ltd — Information Technology
Effective Date: January 1, 2026 (Fictional Demo Document)

1. Overview

Acme Logistics Ltd is committed to protecting company and customer data. This fictional IT security policy applies to all employees, contractors, and third parties with system access.

Violations may result in access revocation and disciplinary action up to termination.

2. Password Requirements

Minimum 14 characters with uppercase, lowercase, number, and special character.

Passwords must be unique to Acme systems — do not reuse personal passwords.

Multi-factor authentication (MFA) is mandatory for all employees. Use the Acme Authenticator app or hardware key.

Passwords expire every 90 days for privileged accounts; standard users use SSO with MFA and no periodic rotation.

Never share passwords, write them on sticky notes, or store them in unencrypted files.

3. Device Management

Company-issued laptops must run Acme Endpoint Protection and remain encrypted (BitLocker/FileVault).

Personal devices (BYOD) may access email and calendar only via Acme Mobile Device Management (MDM).

Install operating system updates within 14 days of release. IT may force updates for critical patches.

Lost or stolen devices must be reported to IT Security within 1 hour at security@acme-logistics-demo.example.

USB storage devices are blocked by default. Exceptions require IT Security approval and device registration.

4. Data Handling & Classification

Public: Marketing materials, published job postings. No restrictions.

Internal: Employee directories, internal memos. Share within Acme only.

Confidential: Customer shipment data, financial reports, HR records. Encrypted in transit and at rest; need-to-know access.

Restricted: Payment card data, authentication credentials. Encrypted; access logged and reviewed

monthly.

Do not email confidential data to personal accounts. Use Acme SecureShare for external file transfers.

5. Incident Reporting

Report suspected phishing, malware, or data breaches immediately to IT Security.

Do not forward suspicious emails — use the "Report Phishing" button in Outlook.

Security incidents are triaged within 4 hours. Critical incidents activate the Acme Incident Response Team.
